**Handcrafted
in the USA!**

Retrofit the Grover Pro Performance Snare System onto any standard snare drum. Easily attach using the enclosed heavy-duty strapping or flexible Dacron cord (for increased sensitivity). Improve the sound & performance of your snare drum!

Grover Pro believes the snare wires are the most critical part of any snare drum. It's the interaction between the wires & bottom head that accounts for the majority of a snare drum's sound. That's why we personally handcraft each snare unit in our U.S. factory, right outside of Boston. Our Non-Spiral Snare (NSS) wires were created to provide increased snare projection, sensitivity, & "fatness" of sound. Unlike ordinary spiral snares (*which only contact the bottom head at the apex of the wire*), our NSS wires make continuous contact over the entire length of the wire. Increased contact maximizes attack & projection across a fuller spectrum of sonorities. Our Non-Spiral Snares are available in a wide range of sizes from standard to extended length models.
